Blacksburg, VA 24061  
800.542.5870

Workshops are divided into two sessions. Choose one presentation to attend during each session.

### Session I

#### Knowledge About College: Create the Path

Join us to discover a ready-to-use college information curriculum for grades K-8! An electronic grade-level based curriculum will focus on familiarizing students with both 2- and 4-year colleges as post secondary education options. This session is designed to assist counselors in educating students who are unfamiliar with, or may not traditionally consider college as a realistic path. This curriculum will incorporate new and existing VIEW resources, ideas for guest speakers and fieldtrips, and ways to incorporate college as part of a career day experience. This session was developed based on research from the 8-year (and counting) Virginia Tech Kindergarten to College (K2C) pipeline program, which encourages students from Title I schools to envision themselves as a college student.

#### Exploring Careers with Project Based Learning\*\*

Get ready to put a new spin on career exploration with this hands on...minds on workshop! Engage your students in a meaningful career exploration process where students gain knowledge and skills for career development by investigating and responding to a complex problem, question, or challenge. Several project based career exploration learning challenges will be introduced from K-8th grade relating to Virginia's Academic Standards of Learning and Counseling Standards. A full electronic toolbox is included with PBL resources.

### Session II

#### VIEW and the New Academic & Career Plan Portfolio

Beginning in the 2018-2019 school year, students will begin the development of an Academic and Career Plan Portfolio (ACPP) in elementary grades to include information about interests, values such as dependability and responsibility, and skills supporting decisions about their future interests and goals. Discover VIEW resources to add to this portfolio including planning notes, class projects, interest inventory results, awards, recognition, and other information related to the academic and career plan portfolio.

#### Imagining the Future:

##### Helping Students Discover Their Passion\*\*

As educators, how can we nurture curiosity in the classroom? This session focuses on mindful ways to help students be creative thinkers, able not only to *set goals* for their future, but also to *dream* about their future. Join us to explore how we can help students think differently, appreciate diverse experiences, and strive to discover their passion. In addition to an interactive in-session experience, participants will explore an electronic toolkit including VIEW resources, activity ideas, and more!

\*\*Please note the *Exploring Career with Project Based Learning* and *Imagining the Future* sessions were presented during the 2016 workshop season, but due to high demand, we are offering these sessions again during the 2017 workshop season.
